

Report

Feature	Student Code	AI Code
Structure	Simple	Advanced
Readability	Easy	Medium
Security	Basic	Good
Session Handling	Yes	Yes

Structure: AI version has organized code into models/ and middleware/ folders, while mine keeps everything in root with inline auth function

Error handling: AI uses try-catch blocks with HTTP status codes (400, 500) and JSON responses; mine uses plain text responses with no error handling

Validation: AI validates inputs (checks empty fields) and returns proper error messages; mine has no validation

Responses: AI returns structured JSON ({success, message}); mine returns plain strings like "Login successful"
